

# Auto-Verify for Amazon Deliveries

[Learn more](#)

Make receiving deliveries from Amazon Logistics even more convenient. Auto-Verify for Amazon Deliveries can be activated with Ring Intercom, granting time-bound access for verified drivers to deliver Amazon packages securely inside your building.

## How does it work?

If a Ring Intercom user has activated Auto-Verify for Amazon Deliveries at your building, drivers with a scheduled Amazon delivery can request access in the app, which triggers a verification check. Once verified, the building entrance is unlocked for a time-limited delivery period. The driver will deliver packages inside the building, according to the recipient's delivery instructions in their Amazon address book.

## Tell me about the benefits

When a fellow resident installs Ring Intercom and activates Auto-Verify for Amazon Deliveries, the feature also becomes available to Amazon customers at your building, at no additional cost. Once activated, Auto-Verify for Amazon Deliveries gives the residents of your building the freedom to head out, knowing their Amazon orders will be waiting at their chosen delivery location when they return. This means fewer redeliveries, more convenient deliveries and happier residents.
